

East Hebron Me. 13th Aug. 1889

Mr. J. Watson Cambridge

Dear Sir

Some years ago I sent a *Nitella* from a large spring in a peat bog here to Mr. T. F. Allen, who thought it might belong to a new species. It was then sterile. This year it is fruiting. I have not now Mr. Allen's address, so I write to you though perhaps it is rather out of your line. If there is anyone now in Cambridge who is authority on Characeae, please refer it to him. If not, please send it on to Mr. Allen, whose address I suppose you can easily obtain. If the plant is of interest to anybody, I will make a number of good specimens and send. I can also send some of the fresh plant if desirable.

Very truly yours

John A. Allen

East Hebron

Maine
